

This Spy Camera DVR in LED Flashlight, often called a "Flashlight Spy Camera" in the press, is a pocket-sized, must-have spy gadget for any occasion. Use it as a regular LED flashlight, or better yet, turn it into a covert spy camera/camcorder that has color video recording (with audio) and instant picture snapshots for day or night surveillance use.

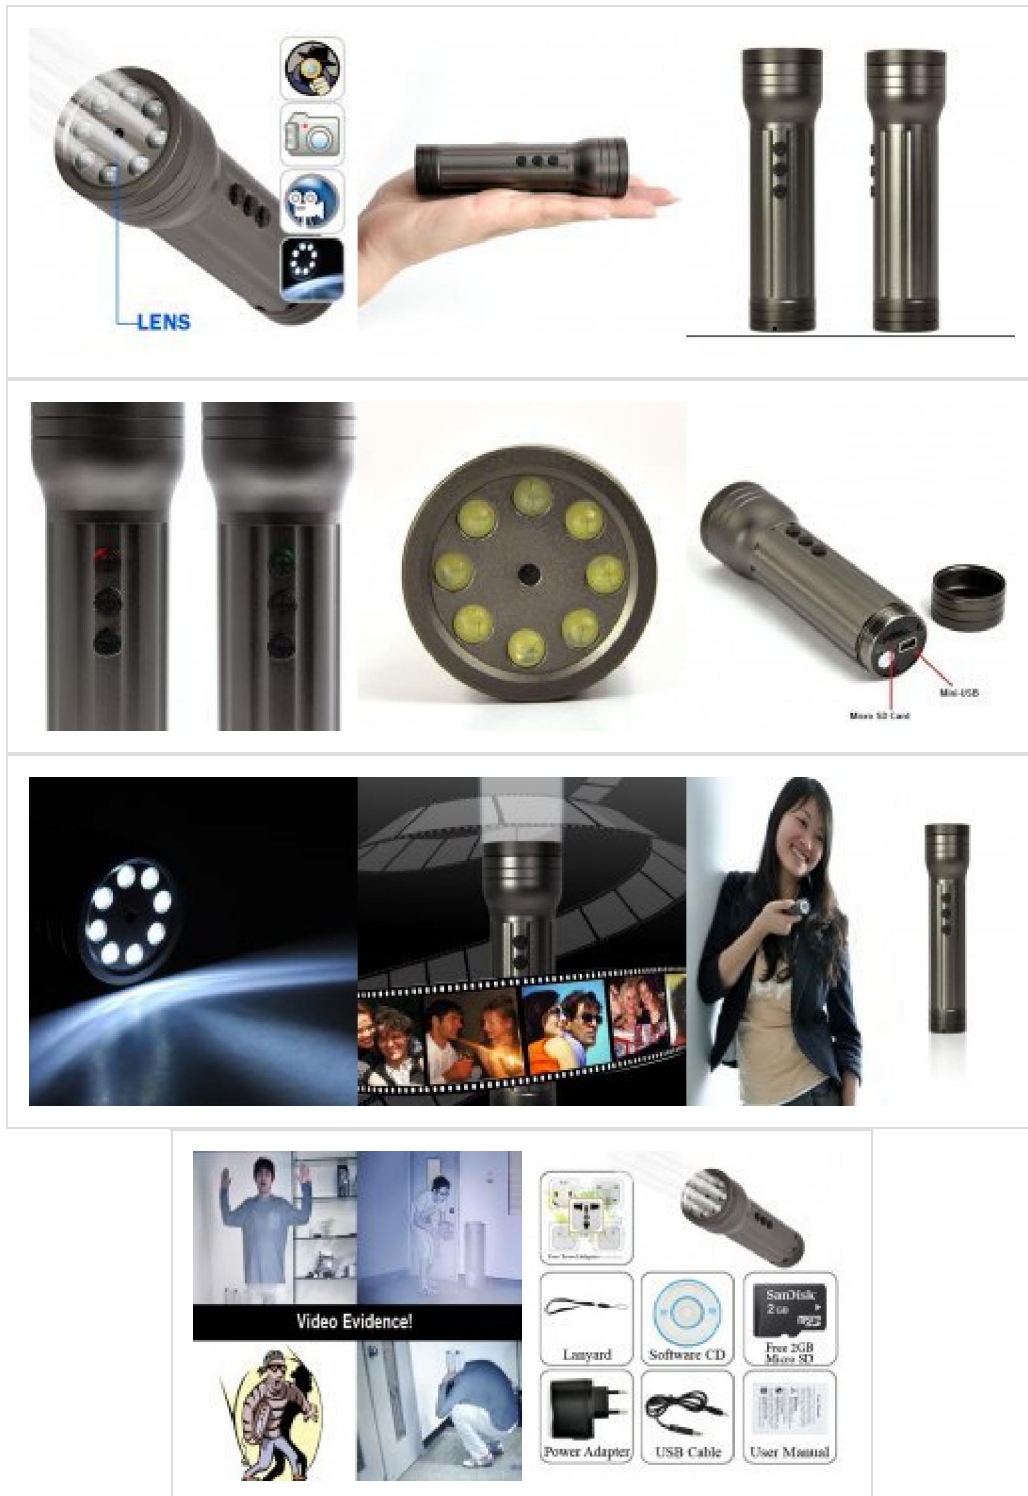

**Powerful LED Flashlight:** Not only does it look and feel like a strong military-grade flashlight, the powerful 8 LED lights provide a high-intensity beam that is perfect for nighttime excursions and working in the dark. The durable all-metal casing is also great during times of rough usage and is even water-resistant for convenient use in any weather condition.

**Hidden Spy Camera:** The inconspicuous design and position of the lens makes this LED flashlight style surveillance camera 100% undetectable. With the simple press of a button, you can record crystal clear 640 x 480 resolution color video (with audio) at 30FPS or take instant picture snapshots - without anyone knowing! Everything is recorded onto a 2GB micro SD card (provided free!), which can be easily viewed on your computer by using the mini-USB connection.

This amazing Spy Camera DVR in LED Flashlight has many uses (ranging from video evidence for the police to keeping a video diary for those exploring dark places) and is especially great as a gift or for reselling online. Available in our warehouse right now, order today and we'll ship it out tomorrow.

### FAQ - Frequently Asked Questions

- § **Why is there no response when I press the picture snapshot/video record button?**  
After each operation, the device will return to standby mode, which causes a very slight 1-2 second delay.
- § **Why can't my computer read this device?**  
For file transfers, it only works on the operating systems listed in the Manufacturer Specifications.  
For all other operating systems, you will need a micro SD card reader.
